

Title of the study

Start-end date of the study:

Abstract

Short overview of the study

Significance of the study

Provide a short description of the theoretical and practical implications of the study. Why are you doing this study? What does it contribute? Try to provide theoretical foundations of the study.

Research question

Study design

Explain the type of study (experimental? Survey? etc). Provide the design specifics of the study (for example, if experimental, randomized control trial, etc.)

Study population

Describe the population parameters, inclusion, and/or exclusion criteria.

Measures

Describe the main variables of the study (dependent/independent/mediation/confounding etc.)

Data collection

Describe what data you are going to collect and how you are going to collect.

Ethical considerations and Data management

State any ethical considerations for your study. Are there privacy concerns? Is the study invasive? Etc. Also, describe how you will store/track your study data and if you will follow any protocols.

Apparatus and Resources

What software, hardware, or other resources will you use/need during the study?
